

Amendments to the Specification

Please amend the paragraph beginning on line 16 of page 6 as follows:

In the meantime, when a person's name is expressed in various languages, diversity of expression increases in proportion to the number of languages. In addition, content description information can be repeatedly shown in various expressions. Accordingly, it is desirable to have a system and method which recognizes one data, accordingly recognizing the same semantic information variously expressed in various ways using a single data representation as one information is very important.

Please amend the paragraph beginning on line 15 of the specification as follows:

As previously described, ~~in the related art, all the user adaptive multimedia services~~ reflect reflecting user preferences ~~depend~~ based on a result obtained by ~~of a matching between~~ user preference information and content description information describing ~~of~~ multimedia data.
